OF LONE
WORKER**

CLC

**KEEPING YOUR
EMPLOYEES SAFE**

HOW DOES IT WORK?

1

When you start your service, place the watch on your wrist and turn it on by holding down the upper button on the watch.

The watch will be operational 5 minutes later.

2

To launch an alert manually, press the top button, then press the bottom button.

✗ No possibility to cancel the alert.

If the watch does not detect any micromovement, an alert will be automatically triggered.

✓ Possibility to cancel the alert.

3

In the case of a micro-movement alert, you have the option of cancelling it within 10 seconds of its launch by pressing the location indicated on the screen.

If the alert is maintained, it is transmitted directly to the monitoring centre, which geolocates you and processes your call as a priority.

4

Our trained emergency operatives talk to you via the watch's loudspeaker and evaluate the situation with you.

If it is a false alarm, simply inform the operative that everything is fine.

If necessary, the operative may call the fire brigade, the company manager or any health and safety office on call at the time of the emergency.

ALERT PROCESSING⁽¹⁾

MANUAL PROCESS
Triggering the alert

AUTOMATIC PROCESS
Automatic triggering of the alert in case of absence of micro-movement

Possibility to cancel the alert

ALERT
NOT CANCELLED

Manual override

End of the alert
